

With reference to ECE/TRANS/WP.29/GRPE/2026/16

Proposal to avoid rework of existing documentation

Keep the previous naming of driver warning and inducement system.

Insert in Annex 11 point 1 the following sentence:

"In the case of vehicles equipped with an ADS, whenever this annex refers to a driver warning or driver inducement, it shall be understood as a warning or inducement signal sent to the ADS."

Justification

The proposed supplement may cause manufacturers to update existing documentation, which is required for the type approval of engines and vehicles according to UN R49. Occurrences of affected wording in required documentation are numerous and the potential effort in case of modifications is unjustified, especially in case of vehicles not being equipped with ADS. Affected documentation:

- Information document
- AES documentation package
- Detailed written information describing the driver warning system and inducement system (2.2.3.)
- Written instructions for vehicle owners (3.1. & 3.7.)

Info

OICA members are reviewing the proposed supplement in detail and may provide further feedback during this week.
